OBJECTIVE

Senior Digital Game Design student at Beykoz University seeking a Game Design Intern position. Experience designing and balancing systems end-to-end — from a 39-page encounter economy for a bullet-hell shooter to a solo-written branching visual novel — carrying full design documents into playable builds in Unity and Ren'Py.

EDUCATION

Beykoz University — Digital Game Design | Istanbul, Turkey
Expected Graduation: June 2027

PROJECTS

Space Rescue — Game Designer, Encounter Balancing | Team Project — itch.io

- Authored a 39-page Game Design Document detailing a fully hand-tuned encounter economy: 7 common enemies, 6 elites, 4 mini-bosses and 1 main boss.
- Balanced enemy mix, timing, and threat escalation across 3 levels × 3 phases × 10 segments, each built around a stated design intent rather than randomness.
- Collaborated with a 2-person team (co-developer, co-designer); playable build live on itch.io, balancing in progress.

Letters Under Sakura — Solo Designer, Writer & Developer | itch.io

- Designed and wrote a psychological horror visual novel from concept to shipped build using Ren'Py.
- Built a paper-reconstruction mini-game and a lightweight per-character relationship-flag system driving branching outcomes.
- Published and live on itch.io.

Cook No Evil! — Lead Designer & Developer | PanicPan Studio — In development — Unity

- Leading a 3-person team (3D artist, animator) on a 3-player asymmetric co-op cooking game where each role is missing a sense.
- Built server-authoritative online co-op over Steam Datagram Relay with Netcode for GameObjects and Facepunch Steamworks: Steam lobby and invite flow, role assignment and reconnection, verified in live 3-player sessions.

SKILLS

Game Design: Game Design Documentation (GDD), Systems & Economy Design, Encounter Balancing & Pacing, Narrative Design

Tools & Engines: Unity, Ren'Py, Netcode for GameObjects, Facepunch Steamworks

Languages: Turkish (Native), English (B1–B2)

PORTFOLIO

jonpierlartin.github.io — playable builds and case studies for all projects above.
